

What is claimed is:

1. A glue for controlling pests that attack wood or wood products, the glue comprising:
 - 5 a resin; and
 - bifenthrin.
2. The glue of claim 1, further comprising:
 - one or more agents for improving spreadability.
- 10 3. The glue of claim 1, wherein:
 - the bifenthrin has a mean particle size of 1-10um.
4. The glue of claim 2, wherein:
 - 15 the bifenthrin has a mean particle size of 1-10um.
5. The glue of claim 1, wherein:
 - the concentration of bifenthrin in the glue results in a concentration of about
 - 25 g ac/m³.
- 20 6. The glue of claim 1, wherein:
 - the resin is a phenol formaldehyde resin.
7. A method for preserving a wood product comprising the steps of:
 - 25 using a glue to join wood subcomponents of the product;
 - the glue including bifenthrin as an ingredient.
8. The method of preserving of claim 7, wherein;
 - the product is plywood and the subcomponents are veneers from which the
 - 30 plywood is constructed.

9. The method of claim 8, wherein:

the bifenthrin is contained in the glue as particles having a mean particle size of between 1 and 10 μm and there is no surface application of insecticide or acaricide.

5

10. The method of claim 8, wherein:

the bifenthrin is contained in the glue as particles having a mean particle size of less than 1 μm and the product is additionally protected with a surface application of insecticide or acaricide.

10

11. The method of claim 7, wherein:

the bifenthrin is introduced into the production process by adding a resin to a glue batch, the resin having the bifenthrin in it.

15 12. The method of claim 7, wherein:

the bifenthrin is introduced into the production process by making a batch of glue having the bifenthrin in it, then using the glue.

13. The method of claim 7, wherein:

20 the bifenthrin is introduced into the production process by making a batch of glue without bifenthrin in it, then adding the bifenthrin to the glue transport prior to applying the glue.

14. The method of claim 7, wherein:

25 the product is any one of the group comprising laminated veneer lumber, finger jointed products, oriented stranded boards, stranded boards, glue laminated lumber, particle boards, or medium density boards.

15. A wood product comprising:

30 wood subcomponents which are joined with a glue;
the glue containing bifenthrin.

16. The wood product of claim 15, wherein:
the glue delivers a bifenthrin concentration of about 25 g ac/m³.

17. The wood product of claim 15, wherein:

- 5 the product is a plywood and the glue contains bifenthrin having an average particle size of 1 to 10 um.

18. The wood product of claim 17, wherein:

there is no surface application of insecticide or acaricide.

10

19. The wood product of claim 15, wherein:

the product is a plywood having a veneer thickness of 3.2 mm and the glue contains bifenthrin having an average particle size of 1 to 10 um.

- 15 20. The wood product of claim 15, wherein:

the product is any one of the group comprising laminated veneer lumber, finger jointed products, oriented stranded boards, stranded boards, glue laminated lumber, particle boards, or medium density boards.

20
